Subject: Monday Meeting re CA Class II program

Steve,

Here are the suggested items we would want to cover on Monday as promised on our call last Wednesday. Below are some of the questions we wanted to discuss re the spreadsheet. We would like to discuss these sometime next week. David has suggested that he and Rob Habel lead this detailed discussion with the appropriate staff involved.

- Update/revision to August 2014 draft Work Plan
 - o UIC regulatory program updates (e.g., items from 2011 audit)
 - o Plan/timeline for submission of aquifer exemption requests
 - o Path forward on the 11 formations
 - o Other UIC issues (e.g., cyclic steam wells)
- Status of 60-day deliverables
 - o Drinking water source evaluation
 - o Plan/timeline for completion of Class II database
- Status of current Orders/Appeals
- Status of QA on August 2014 list of wells into non-hydrocarbon producing zones (see list of questions below)

Questions regarding DOGGR spreadsheet of injection wells in non-hydrocarbon producing aquifers (that have not clearly been exempted)

1. How was the spreadsheet developed and what QA was done or can be done to ensure it is complete (e.g., the Hathaway well 02949075 is not on the spreadsheet, but should have been flagged)?
2. Describe the source of formation/injectate TDS information in the spreadsheet; also the date of the existing formation TDS information.
3. Do you have information as to whether any fracking fluids are being disposed of into the wells on the list, and if so, which ones?
4. There are a number of wells shown as disposing into sub-3000 ppm TDS formations; assuming the table information is verified, when will these operators receive Notices?

I left a voicemail with some additional details. Thanks and have a good weekend

Michael Montgomery
